DETECTED VULNERABILITIES

0	6	1

ISSUES

MEDIUM Function could be marked as external.

The function definition of "setDelay" is marked "public". However, it is never directly called by another function in the same contract or in any of its descendants. Consider to mark it as SWC-000 "external" instead.

131
             return block.timestamp;
133
```

LOW Potentially unbounded data structure passed to builtin.

SWC-128

Gas consumption in function "executeTransaction" in contract "Timelock" depends on the size of data structures that may grow unboundedly. Specifically the "1-st" argument to builtin "keccak256" may be able to grow unboundedly causing the builtin to consume more gas than the block gas limit, effectively causing a denial-of-service condition. Consider that an attacker might attempt to cause this condition on purpose.
